FACULTY OF DENTAL SCIENCES

DEPARTMENT OF CONSERVATIVE AND ENDODONTICS

BRIEF SUMMARY OF PRECLINICAL THIRD YEAR CONSERVATIVE LAB:

Conservative dentistry, a treatment process whereby a minimum of healthy tooth structure is removed during a restorative process, is inherently a desirable dental objective.

Conservative procedures are the essential skills that students should acquire in their undergraduate education.

Students in their preclinical conservative labs are performing cavity preparations on the models / jaw simulators as well as on the extracted teeth in the appropriate sanitary regime to extend their knowledge and clinical skills in advanced and complex restorative dental treatment before starting the procedure on the patients.

Students enhance their skills by preparing all the different class of cavity preparations, like class I cavity, class II cavity preparations & restorative material handling and management.

The conservative preclinical practice is providing students the necessary foundations to provide more complex treatment in the general dental practice.
