Effect of CNS suppressant and skeletal muscle relaxant drug on mice using rotarod apparatus

Introduction Experiment Observation

Equipment

Rotarod apparatus has a horizontal grooved rod rotating at a fixed speed. The mice are made to balance on this rod. Dependent upon their motor co-ordination, Central nervous activity and grip strength the animal either stay on the rotating rod for specific time and after that fall down on the platform of each compartment. The floor of each compartment has sensors that deactivate the timers and the exact fall off time for each rat is displayed on the respective display.
